## **Quarterly Illustration of Retail Revenue Adjustor and Power Supply Adjustor**

## **Assumptions:**

- 1.) Actual retail sales are lower than forecast by 10,000 MWh, and \$1.4 million.
- 2.) GMP avoids purchasing that 10,000 MWh on spot market at an average of \$30/MWh. The net of other Component B costs & revenues is assumed to otherwise equal the benchmark level.
- 3.) Actual Component A costs come in \$3 million lower than the benchmark.
- 4.) Benchmark values for the quarter are illustrative, but similar in magnitude to Q2 FY18

Revenue Component A Component B	Actual \$162,600,000 \$38,500,000 \$58,700,000	Benchmark \$164,000,000 \$41,500,000 \$59,000,000	-\$3,000,000	Notes Per Assumption #1 above Per Assumption #3 above Per Assumption #2 above	
Step 2: Cost Variance calculation and bandwidths					
Retail Sales in kWh	<u>Actual</u> 1,102,000,000	Benchmark 1,112,000,000	<u>Variance</u> -10,000,000	Per Assumption #1	
Component B Cost per kWh	\$0.0533	\$0.0531	\$0.0002	Actual Component B costs per kWh were slightly higher than benchmark	
Component B Cost Variance:	\$230,576			Variance in Component B costs per kWh times actual retail sales	
Amount GMP (absorbs)/keeps:	-\$158,058			\$150 K Efficiency Band + 10% thereafter. In this example, GMP absorbs about \$158k of cost	t increas
Component B Variance (adjusted for Cost Variance)	-\$458,058			(\$300,000) raw Component B variance, plus about \$158k of cost variance absorbed by GMP	)
,	. ,				
Step 3: Calculation of Retail Revenue Adjustor and Retail Revenue Adjustor:	<b>Power Supply Adju</b> \$1,400,000	stor		Collection from customers of \$1.4 million, offsetting the decline in retail sales	
Step 3: Calculation of Retail Revenue Adjustor and		stor		Collection from customers of \$1.4 million, offsetting the decline in retail sales  Actual Component A costs \$3 million below benchmark; full return to customers.	
Step 3: Calculation of Retail Revenue Adjustor and Retail Revenue Adjustor:	\$1,400,000	stor		•	
Step 3: Calculation of Retail Revenue Adjustor and Retail Revenue Adjustor:  Component A:	\$1,400,000	stor		Actual Component A costs \$3 million below benchmark; full return to customers.	
Step 3: Calculation of Retail Revenue Adjustor and Retail Revenue Adjustor:  Component A: Component B:	\$1,400,000 -\$3,000,000 -\$458,058 -\$3,458,058	stor		Actual Component A costs \$3 million below benchmark; full return to customers.  Actual Component B costs \$300k below benchmark; GMP absorbs \$158k of cost variance.	
Step 3: Calculation of Retail Revenue Adjustor and Retail Revenue Adjustor:  Component A: Component B:  Power Supply Adjustor	\$1,400,000 -\$3,000,000 -\$458,058 -\$3,458,058	stor		Actual Component A costs \$3 million below benchmark; full return to customers.  Actual Component B costs \$300k below benchmark; GMP absorbs \$158k of cost variance.	
Step 3: Calculation of Retail Revenue Adjustor and Retail Revenue Adjustor:  Component A: Component B: Power Supply Adjustor  Step 4: Net Retail Revenue Adjustor and Power Adj	\$1,400,000 -\$3,000,000 -\$458,058 -\$3,458,058	stor		Actual Component A costs \$3 million below benchmark; full return to customers.  Actual Component B costs \$300k below benchmark; GMP absorbs \$158k of cost variance.  Total Power Adjustor: Component A + Component B (adjusted for cost variance)	
Step 3: Calculation of Retail Revenue Adjustor and Retail Revenue Adjustor:  Component A: Component B: Power Supply Adjustor  Step 4: Net Retail Revenue Adjustor and Power Adj Retail Revenue Adjustor:	\$1,400,000 -\$3,000,000 -\$458,058 -\$3,458,058	stor		Actual Component A costs \$3 million below benchmark; full return to customers.  Actual Component B costs \$300k below benchmark; GMP absorbs \$158k of cost variance.  Total Power Adjustor: Component A + Component B (adjusted for cost variance)  Recovery from Customers of \$1,400,000 due to lower retail sales.	
Step 3: Calculation of Retail Revenue Adjustor and Retail Revenue Adjustor:  Component A: Component B: Power Supply Adjustor  Step 4: Net Retail Revenue Adjustor and Power Adj Retail Revenue Adjustor: Power Supply Adjustor:	\$1,400,000 -\$3,000,000 -\$458,058 -\$3,458,058 ustor \$1,400,000 -\$3,458,058	stor		Actual Component A costs \$3 million below benchmark; full return to customers.  Actual Component B costs \$300k below benchmark; GMP absorbs \$158k of cost variance.  Total Power Adjustor: Component A + Component B (adjusted for cost variance)  Recovery from Customers of \$1,400,000 due to lower retail sales.  Return to customers
